

ABOUT THE INSTRUCTOR

Derek Bell is a highly experienced and qualified international consultant and certified trainer and project management professional. He has attained the PMP (Project Management Professional) and APMP from the Project Management Institute and Association of Project Management respectively along with being an Advanced Practitioner in Managing Successful Programmes and holds numerous other project management qualifications to keep him abreast of the latest developments in the field.

He is a lead instructor and developer of course materials for one of the supermajors. His numerous international assignments have led to him developing course programmes and materials for National Oil Companies, the Vietnamese Petroleum Institute and multiple contracting and supplier organisations. He typically spends around 30 weeks a year on international assignments typically Houston, the Middle East, Far East and Africa.

He is also an experienced facilitator and coach with extensive experience at recovering troubled projects, project initiation workshops and risk workshops both project-based and operational. He is also a firm believer that training and learning should be both interactive and fun.

Delivery style

Delivered by a program director who combines extensive knowledge of Oil and Gas sector project, program and risk management, with practical experience of recovering troubled projects around the world. He is a highly sought after for his expertise, guidance and training internationally, his exceptional communication skills coupled with a strong conviction that learning should be interactive and fun allow him to consistently deliver valuable and dynamic learning. His delivery will include a blended approach including industry case studies, group exercises and discussion.

Overview

What is the programme about?

Risk management is a core skill which needs to be carried out more effectively than ever before due to the scrutiny that our activities are placed under on a daily basis. Given the scale, global nature and value of projects in the Oil and Gas industry, this requirement is particularly relevant. Recent environmental disasters, geo-political situations and economic instability have increasingly highlighted the need for applying a risk aware structure to all your projects to manage and control your risks, and mitigate against resultant impacts.

This interactive and challenging workshop provides an opportunity to understand how best to protect value in the capital intensive project environment that we work in. The course is designed to enable practical lessons from the industry to be learnt and applied in a supportive environment to enhance the knowledge and capabilities of each participant.

The expert programme director will review the risk process and how best to apply it over the full project lifecycle. Techniques for identifying, analysing, planning risk responses, and monitoring and controlling risks will be explored and practiced. At all times being mindful of the need for sound health, safety, environmental and reputational factors to be properly managed from the risk perspective.

Key learning points include

- Key lessons and critical success factors for successful project risk management the Oil and Gas Industry
- Risk identification and measurement of industry specific risks including geo-political, environmental and economics
- Applying a systematic project risk management process to a realistic industry project case study
- Alternative risk identification techniques and their strengths and applicability
- Evaluation of resource effectiveness of alternative responses
- Core concepts and principles of risk management unique to Oil and Gas Industry projects

A 2-day practical case-study based training programme for Oil and Gas Industry Professionals

Overcome the huge risk challenges in projects whose scale, complexity and visibility challenges are unique to the Oil and Gas Industry

Unique Industry Case study

Projects in the oil and gas industry bring with them very specific challenges; not only due to their size and scale, but also due to the diverse objectives of the parties involved and the geographic, political and economic factors that are a constant and unpredictable influence. It is vital that you understand the risks and their impact at each stage of the project. Therefore a unique case study has been developed specifically for this programme to illustrate the entire project lifecycle of an oil and gas industry project. The participants will work in groups to apply the key learnings to each stage of the project and gain full and thorough understanding of the key pressure points and how to manage, control and mitigate against them.

Who Should Attend?

This programme is essential to the following roles:

- Project Managers, Project Engineers
- Risk Managers and those with specific risk responsibilities
- Project sponsors and managers
- Purchasing and procurement managers who will be supporting projects
- Contractors and consultants contributing to projects
- Operational staff who need to interface with projects or represent the operational perspective on a project
- HSE staff interfacing with project activities
- Governance and auditors who will be reviewing or auditing project performance
- Anyone who needs to contribute to managing risk

Who will benefit?

This highly practical and interactive programme will allow you to:

- **Review** the strategic drivers within the Oil and Gas industry which determine how we should be tackling risk management for our projects
- **Understand** why oil and gas projects fail and how to avoid this within your own activity
- **Get to grips** with key steps to setting up a sound risk management process for any project
- **Evaluate** the key factors which drive project risk management success and the vital need for a multi-disciplinary team to provide alternative perspectives
- **Compare** best practice with colleagues from across the global industry
- **Learn** in a dynamic, highly interactive and practical environment that will provide you with skills and knowledge to improve your personal and project performance
- **Examine and identify** any weaknesses in your current project risk management processes and how to set up appropriate changes and
